

STATION F

Our incubation programme at Station F

The École nationale des ponts et chaussées, its teaching staff, researchers and students are once again at the heart of the key issues facing our society: sustainable cities and transport, energy transition, and the general standard of teaching and of our twelve research laboratories remains excellent.

Faced with the profusion of business creation initiatives, Ponts Alumni wanted to provide material, intellectual and moral encouragement to all our potential creators and future successful entrepreneurs. So, since July 2017, Ponts Alumni has been providing the young start-ups it hosts in its programme with **31 workstations** in Station F, the world's largest incubator developed by Xavier Niel in the Halle Freyssinet. It offers them the opportunity to benefit not only from the working environment but also from all the opportunities for meetings and exchanges that this unique place has to offer.

The results have been very positive: **104 start-ups have been welcomed** since our arrival at Station F, and the current class includes 16 companies. These start-ups are active in a wide variety of fields: navigation assistance for drones, structural calculations, interpretation of medical imaging, a system for adapting wheelchairs to electric scooters, green urban furniture to soothe the effects of the summer heatwave, Fintech, Construction, Energy, Environment and Climate, Health, etc., with some excellent fund-raising...

Projects are selected by a committee made up of Ponts Alumni, representatives of the School and research laboratories.

The next **Selection Committee** meeting will take place on
Monday 19 december 2025.

Application deadline : 12 december 2025

STATION F
